Olomouc

For the Omega Sport & Health Centrum in Olomouc, the designer was looking for a contemporary, light coloured Solid wooden sports floor, with a natural look.

At the same time the sports floor had to be a high performance wooden floor, that provides its members with comfortable shock absorption, resilience and excellent surface properties.

For this particular project the perfect solution was a sports floor in 22mm solid Beech Premium installed on a Unobat 62+ sub-construction. This particular sub-construction is a batten based solution and it also features a unique adjustable and locking wedge system making it easy to level and accommodate the flatness of the hardwood flooring to all types of uneven subfloors.
